Global Program Evaluation Policy
Effective from 7/27/2009

PURPOSE

The purpose of the General Surgery Residency Global Program Evaluation System is to acquire feedback from general surgery categorical and non-designated preliminary residents in their clinical years as well as from faculty members on their perceptions of the overall quality of their educational experiences for the year. Resulting data will be used to identify positively and negatively perceived aspects of the residency program.

PROCEDURES

   Residents will be reminded via an electronic message to complete the Global Evaluation form in early June of each year. One report will be generated annually and distributed to the Program Director, Associate Program Directors and Vice Chair of Education by July 1st.

2. Follow-up Decisions
   Results will be shared with the Resident Advisory Committee to discuss strengths and weaknesses of the overall program, as well as possible solutions to addressing critical problems.

3. Quality Control
   Resident compliance in completing the forms will be monitored by the Surgical Education Office. The Global Evaluation must be completed prior to sign out at the end of the year for residents leaving the program, in order for each to receive a Certificate of Residency Program Completion. All residents remaining in the program must complete all assigned evaluations prior to advancing to the next academic year. If a resident does not complete all assigned evaluations, a note will be sent by the Program Director to the resident and copied in the resident’s file.
